TITLE: Communication system with multivalued modulation characteristic

SOURCE: IVUZ. Radiotekhnika, v. 9, no. 3, 1966, 287-291

TOPIC TAGS: signal modulation, communication system

ABSTRACT: Conventional types of modulation (AM, FM, PhM) have this serious drawback: a weak signal causes only a small deviation of the modulation parameter

Fig. 1. Multivalued modulation characteristic

and, therefore, is subject to strong distortion by noise. Nonlinear modulation does not remedy the situation; it only redistributes the noise. The present article proposes an original modulation system, in which an "abstract phase" x is proportional to the modulating signal, $x(t) = k \cdot u(t)$. Only one position of the operating point on the multivalued modulation characteristic (see figure) corresponds to a given abstract-phase value, and vice versa. The selected modulation parameter varies

Card 1/2

UDC: 621.396.235

ACC NR: AP6032918

as: $y(t) = \Phi[x(t)]$. Many values of $x(t)$ correspond to an instantaneous value of the modulation parameter $y(t)$; however, there is only a single-valued correspondence between the entire functions $y(t)$ and $x(t)$. In the receiver, a reverse mathematical operation is performed with $y(t)$, i.e., $x(t) = \Psi[y(t)]$. Hence, the demodulation characteristic will have the form shown in Fig. 2. A modulation characteristic in the form of $\sin x$ is considered as an example; a block diagram of the required demodulator is shown. It is claimed that the signal-to-noise ratio will be more favorable in such a modulation system, particularly with lower noise levels. Orig. art. has: 4 figures and 9 formulas.

all works on the object. At last, the quality of performance of the 1-course students cannot be high, even with the careful control of a practice supervisor. Attempts of the department of geodetic fundamentals of the Warsaw Polytechnic Institute to carry out the practice of 1-course students on industrial objects were successful only in one case (Karolewo, Olstyn province) where the work was performed by a team of students, technicians-geodesists. The experience of conducting educational practice for the 1st course, accumulated for many years, has shown that a student team should consist of 6 people, and mixed teams should not be admitted. The amount of work performed by female teams should be less, by 20 - 25%, than that of male teams.

TITLE: Redta 002 double-image reduction tachymeter¹² manufactured by Zeiss

SOURCE: Przegląd geodezyjny, no. 2, 1966, 64-68

TOPIC TAGS: geodetic instrument, optic measurement, measuring apparatus, measuring instrument, error, multiplication factor, telemetry, DISTANCE MEASURING INSTRUMENT / REDTA 002 DISTANCE MEASURING INSTRUMENT

ABSTRACT: This is the first part of a study of Redta 002 double-image reduction tachymeters manufactured by the Zeiss-Jena Company in the German Democratic Republic. An investigation of the tachymeters disclosed two important sources of error owing to improper functioning of the plane parallel plate of the optic micrometer and to sensitivity to temperature changes which affects the value of the multiplication factor k . The measurement results show that 1) at an average distance of 100 m the difference in readouts on the scale of the micrometer barrel set at 0 and 20 amounts to 4.3 and 6.5 cm for tachymeter I and tachymeter II, respectively, and that at an average distance of 150 m the difference is 6.1 and 8.2 cm, respectively, and 2) at

Card 1/2

ACC NR: AP6019918

temperature drops from 16 to 2 C the length of a 100 m segment increases by more than 4 cm, and at temperature drops from 2 to -4 C the length of the segment also increases by 4 cm indicating that at minus temperatures the change in the multiplication factor k diminishes the accuracy of distance measurements to a greater extent than at plus temperatures. This study of tachymeters is being continued. Orig. art. has: 6 figures, 3 tables, and 14 formulas.

TITLE: Gravimetric connection between Warsaw and Station A. B. Dobrowolski in the Antarctic

PERIODICAL: Geodezja i Kartografia, v. 9, no. 3 - 4, 1960, 197 - 208

TEXT: Between December 1958 and March 1959, in the frame of the Antarctic expedition organized by the International Commission of the Geophysical Year under the presidency of the Polish Academy of Sciences, the authors, assistants to the Chair of Geodesy of the Warsaw Polytechnic, realized the gravimetric connection between Warsaw and the Antarctic. The first point was located in the Institute (coordinates: $\varphi = 52^{\circ}13'3''$ N $\lambda = 21^{\circ}00'8''$ E $H = 114.3$ m) and the second in Station A. B. Dobrowolski - in the Bunge Oasis (coordinates: $\varphi = 66^{\circ}16'3''$ S $\lambda = 100^{\circ}45'0''$ E $H = 35.4$ m). The elevation of this point was determined by levelling from the water level of Figueiro Lake, 11.6 m above the sea level of the Indian Ocean according to the measurements of the second Russian expedition in 1956/57. The determination of the variations of the acceleration were carried out with an apparatus "Askania", equipped with four half-second invar pendulums, Sterneck type and photographic recording of the pendulum passages to the rest point and of the

Card 1/ 2

P/028/60/009/003-4/002/002

Gravimetric connection between Warsaw and Station A. B...A056/A126

time signals. The apparatus was endowed a control manometer and a compensation of the magnetic field (Helmholtz coil). This apparatus had been used from 1956 to 59 for a gravimetric survey of Poland, with an accuracy of ± 0.2 mgal. The pendulum periods were controlled by the use of time-signals: In Warsaw, before departure and after the return, from the radiostations DIZ (Potsdam), GBR (Rugby), ROR (Moscow) and FYP (Pontoise). In the Antarctic, from GBR, RPT, RWM, ROR, and TQC (Pontoise). In this manner, three stations - GBR, ROR, FYP/TQC - were received at the two points. For the reduction of the pendulum periods, the characteristics of the apparatus as determined during the gravimetric survey of Poland were taken into consideration. Only the thermal coefficients were determined specially for temperatures between -7 and $+35^{\circ}\text{C}$. The following results were obtained: 1) Difference of the acceleration of gravity $g_{\text{Antarct}} - g_{\text{Warsaw}} = +1,201.8$ mgal ± 0.3 mgal. 2) Acceleration of the gravity at the Antarctic station $g = 982,438.4$ mgal ± 0.4 mgal. 3) Faye's anomaly, related to the normal acceleration, according to the 1930 formula $g_0 - \gamma_0 = +68.5$ mgal.

TITLE: Method for observing shadowgraphs. Class 42, No. 188061

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 21, 1966, 129

TOPIC TAGS: shadowgraph photography, collimator

ABSTRACT: This Author Certificate presents a method for observing shadowgraphs, involving illumination of the observed object with the subsequent recording of the produced shadowgraph. To observe the shadowgraph in two arbitrarily selected directions at the same time with independent adjustments of the shadowgraph and to widen the volume of information about the density distribution in aerodynamic fields, the observed object is illuminated by two antiparallel light beams. The beams are directed through the slits of the shadow instruments and through the objectives of collimators which are at the same time the collectors for the opposite beams (see Fig. 1).

Fig. 1. 1 - entrance slits; 2 - plates; 3 - collimator objectives; 4 - investigated object

Separation of the light beams is accomplished by semitransparent plates placed either in the light beams or between the lenses of the erecting system. Orig. art. has: diagram.

Title : The Results of the Introduction of Coniferous Trees
on the Southern Coast of the Crimea

Orig Pub : Byul. nauchno-tekhn. inform. Gos. Nikitsk. botan. sad,
1957, No 3-4, 6-9

Abstract : 181 species of coniferous were tested during the time
when the Nikitsky garden was in existence. 99 of them
were found to be useful and 82 unsuitable. 32 species,
which are drought resistant under normal conditions in the
lime-argillaceous cultivated soils of the lower belt of
the Southern Crimean shore, are fit for extensive cul-
tivation without irrigation. 18 species are fit for
cultivation without irrigation only on fresh soils and 11

species can only be grown on non-calcareous soils. 7 species and one variety are fit for extensive cultivation with irrigation. 25 species and 4 varieties are fit for limited cultivation with irrigation. A considerable number of species can be grown only on soils formed on non-calcareous rocks. A great many species are unfit for cultivation on account of insufficient drought and frost resistance -- I. K. Fortunatov

TITLE: Analysis of tests of a unit for the atomic power station "Arbus" for
regenerating a gas oil coolant by degeneration hydrogenation

SOURCE: Moscow. Institut atomnoy energii. Doklady, IAE-1066, 1966. Analiz
ispytaniy ustanovki destruktivno-gidrogenizatsionnoy regeneratsii gazoylevogo
teplonositelya AES Arbus, 1-24

TOPIC TAGS: organic moderated reactor, organic coolant, atomic energy,
atomic power station, organic cooled nuclear reactor, catalyst, catalyst
regeneration/Arbus-I atomic power station

ABSTRACT: An analysis is made of data obtained in the experimental operation of
the "Arbus-I" atomic power station and related laboratory studies. The "Arbus-I"
differs from other atomic power stations using organic-cooled and-organic-moder-
ated reactors in that its gas oil coolant is regenerated by means of a hydrogenation-

Card 1/2

L 01238-67

ACC NR: AT6031142

degradation process. The investigation showed that regeneration through hydro-
generation-degradation considerably decreases radiolytic losses in the coolant.
The principal parameters for the regeneration of hydrostabilized gas oils are given
and the useful life of the aluminocobalt molybdenum catalyst under adopted operat-
ing parameters is determined. Orig. art. has: 8 figures and 5 tables. [SP]

USSR/Geophysics - Insolation of hill slopes

FD-780

Card 1/1 : Pub 129-17/24

Author : Zabelina, T. M., and Zabelin,

Title : Influence of exposure (solar) and steepness of slopes upon the elements of the geographical medium

Periodical : Vest. Mosk. un., Ser. fizikom. i yest. nauk, Vol 9, No 2, 125-134, Mar 1954

Abstract : Investigate the daily behavior of insolation on hill slopes for various exposures, steepness, and times at the latitude 52°17' (in East Sayan). Conclude that the various components of the geographic medium react differently to the variation in exposure (and steepness) of slopes.

The Nature of Changes in Landscape

The author considers as untrue the notion that reversible changes are absent in the development of landscapes. According to the author, an example of such changes is seasonal changes, which do not change the nature of the landscape. (RZhGeol, No. 4, 1955) Izv. Vses. geogr. o-va, 86, No. 4, 1954, 354-356.

Zabelin, Igor' Mikhaylovich

Astrogeografiya; yeye predmet i zadachi (Astronomical Geography;
Subjects and Problems) Moscow, Geografizdat, 1958. 61 p.
20,000 copies printed.

Ed.: S.N. Kumkes; Tech. Ed.: E.N. Vilenskaya .

PURPOSE: This booklet is intended for the general reader
interested in developments in the earth sciences.

COVERAGE: This booklet acquaints the reader with the content and
scope of a new branch of the earth sciences - astrogeography.
This discipline studies the processes in the development of
matter in the universe which lead to the appearance of life.
Astrogeography represents an extension of physical geography to
planets other than Earth. The booklet provides a comparative
analysis of the natural conditions prevailing on Earth, Venus,
and Mars. I.M. Zabelin, A.G. Isachenko, V.G. Pesenkov,

AUTHOR: Zabelin, I.M., Candidate of Geographical Sciences

TITLE: On the Threshold of Space Evolution

PERIODICAL: Nauka i zhizn', 1960, No. 11, p. 34

TEXT: The author looks forward to the foundation of "biogenology" or the science dealing with the evolution of life in various parts of the universe. He points out that life in the sea evolved up to a certain point and then slowed down because the stable environment offered by the sea was not particularly conducive to evolution. The more varied and rugged conditions on land led to rapid evolution culminating in homo sapiens. Similarly, rugged and varied conditions throughout the universe must have led to the development of extra-terrestrial intelligent life. Man brought up outside human society reverts to the beasts, but the author anticipates a time when "humanity", as well as other at present acquired characteristics (learning), will be genetically inheritable traits. This trend, he claims, is partly present already in geniuses, but will develop and spread with the continued psychological evolution of man. ✓
